- Effective Teamwork

TOOLS

- VS Code
- IntelliJ Idea
- MS Office
- Postman
- Github
- Bootstrap
- Autocad
- MongoDB

PROJECT

Project 1 - *Wanderlust website*

Jan 2025 - mar 2025

Project link - <https://wanderlust-project-yu4j.onrender.com/listings>

Technology - Frontend and backend both use in this project

Frontend - HTML5, CSS (Bootstrap), ejs, Javascript etc.

Backend - MongoDB Database, Express, Node JS, Rest etc.

My Role - Backend

Description - Wanderlust is a dynamic full-stack web application that allows users to explore, create, and manage travel destination listings. Inspired by travel platforms like Airbnb, this project demonstrates CRUD operations, form validations, database integration, and relational data handling.

Key Features - Users can create, edit, view, and delete travel destination listings.

 Integrated review system with rating and comment support.

 Image uploads for listings using Cloudinary (if implemented).

 Server-side validation using Joi and custom error handling.

 Clean and responsive UI built with Bootstrap and EJS templating.

 Scalable backend using Express and MongoDB (via Mongoose ORM).

Project 2 - *Cafe Nippon*

May 2025 - Jun 2025

Technology -, CSS, JavaScript, Node.js, Express, MongoDB, REST API, JWT Auth, Postman.

My Role - Self Project

Key Features - User & Admin Authentication, Order Placement System, Admin Dashboard, Dynamic Menu Management, Order Status Tracker, Order Status Tracker.
